Air-quality Test Results for Glenwood Elementary School available on Vestal Central School District website

The district has continued to monitor and maintain mold occurrences both at Glenwood Elementary and Tioga Hills Elementary schools. Several air quality tests have been performed in both buildings, and the district has had regular meetings with a certified industrial hygienist to review the results. All results for GLE have been analyzed, and, as of today, a comprehensive report of those findings has been provided to the district. A copy of the report is available for review on the District website.

The same testing procedures have been implemented at Tioga Hills Elementary and a similar report for Tioga Hills will be forthcoming.
